

MSc in Landscape, Environment & History Edinburgh University

<http://www.shca.ed.ac.uk/postgraduate/taught/landscape/>

The MSc programme

Dominating our contemporary world are topics such as renewable energy, the importance of tree cover, environmental pollution, urban regeneration, and the importance of iconic buildings. Each shares two common elements: a relationship to their **landscape** and an interaction with the **environment**.

This innovative MSc provides a **historical context** for such issues. You will:

- Learn how and why natural resources and urban spaces have changed over time;
- Benefit from academic expertise in partnership with the practical knowledge of curators and conservationists;
- Develop independent study and research skills.

Online Delivery

The Online delivery of this Masters programme is especially suited to **flexible part time study**. Once registered, an internet connection is all that you need to access course materials and a variety of digital resources to which Edinburgh University subscribes – academic journals, government reports, datasets, and much more. Materials, assignments and readings are delivered electronically in carefully structured sessions.

Flexible Learning

The programme will appeal to students all over the world. We set Scottish examples in an international context. **Politics, ecology, archaeology, heritage and history intersect.**

Whatever your enthusiasms – local history, natural history, urban redevelopment, archaeology, or just enjoying the landscape – **this course is for you.**

You can get a **TASTER** of this programme. Go to: <http://www.shca.ed.ac.uk/postgraduate/taught/landscape/>
